IS YOUR BODY BABY-FRIENDLY?: UNEXPLAINED INFERTILITY, MISCARRIAGE & IVF FAILURE – EXPLAINED BY ALAN E. BEER, JULIA KANTECKI, JANE R PDF

By reading this publication Is Your Body Baby-Friendly?: Unexplained Infertility, Miscarriage & IVF Failure – Explained By Alan E. Beer, Julia Kantecki, Jane R, you will get the very best point to get. The brand-new point that you do not should spend over money to get to is by doing it on your own. So, just what should you do now? Visit the link page and download and install guide Is Your Body Baby-Friendly?: Unexplained Infertility, Miscarriage & IVF Failure – Explained By Alan E. Beer, Julia Kantecki, Jane R You can get this Is Your Body Baby-Friendly?: Unexplained Infertility, Miscarriage & IVF Failure – Explained By Alan E. Beer, Julia Kantecki, Jane R by on the internet. It's so simple, isn't it? Nowadays, modern technology really assists you tasks, this online publication Is Your Body Baby-Friendly?: Unexplained Infertility, Miscarriage & IVF Failure – Explained By Alan E. Beer, Julia Kantecki, Jane R, is too.

From the Publisher

A unique book—the first of its kind. No longer do patients have to accept that their infertility is "just bad luck" and they just have to "keep on trying." No longer should women with recurrent miscarriages have to listen to their doctor telling them that their loss was "God's will" or that they ought to be thankful because their baby was probably chromosomally abnormal. The statistics simply do not support such claims—in fact, they show that repeated reproductive failure can be a symptom of wider health problems in the mother. Furthermore, the root cause can be treated—not only to promote the chances of a successful pregnancy, but to improve the mother's health long-term.

From the Author

In response to growing demand, the thoughts and theories of the internationally acclaimed fertility specialist Dr. Alan Beer have been documented. "Is Your Body Baby-Friendly?" explains for the first time ever why "unexplained" infertility, IVF failures and recurrent miscarriages happen.

This book shows how the immune system can behave in a way that prevents a pregnancy from continuing. High levels of Natural Killer cells, genetic compatibility between partners and blood clotting problems are all significant causes of reproductive failure.

Autoimmunity—either inherited or environmentally triggered—is a major reason for the increase in infertility and miscarriage today. In addition to medical treatments, there are also natural ways that the immune system can be moderated to create a more "baby-friendly" environment.

For the first time, readers will be able to see that their reproductive problems have a root cause and that in many cases, they can be addressed with immune therapy and possibly by making certain changes to their lifestyle.

Foreword

Reproductive failure and repeated pregnancy loss is devastating for the patients involved. The devastation is emotional, physical and financial and can mean the loss of valuable ovarian time for the patient, and frustration and disappointment for the practitioners involved.

There is always a reason for any pregnancy loss and this book very eloquently lays out the standard testing. Dr. Alan Beer then examines and categorizes what can be done in the so-called unexplained, and by inference "hopeless," cases. Once the usual factors like chromosomal abnormalities, uterine defects, infections and the hormonal milieu have been excluded, this book speaks to a group of patients who still have unexplained loss.

The immune system is at the center of who we are. It protects us against infections and abnormal cells that can in some cases become malignant. Many patients with cancers previously labeled terminal and untreatable are now being treated by inducing a favorable immune response to markers derived from the actual tumors themselves.

It amazes me how long it has taken fertility practitioners to make the connection between recurrent failed treatment and recurrent loss, and the immune mechanism of attack – given the fact that the implanting embryo is genetically different from the mother or carrier. Something almost magical happens to prevent rejection of this graft in the vast majority of pregnancies. For a small group of patients, this magical event does not happen and we are left with immune attack and thrombosis, which either prevents implantation or causes loss or inadequate intrauterine nutrition.

Dr. Alan Beer has devoted his life to the investigation and treatment of recurrent failed treatment and pregnancy loss. I have had the privilege of knowing him and treating patients with him for almost 15 years.

In this book, he seeks rational explanations and lays out modalities of treatment, which have helped thousands of patients who previously had been given no hope, to receive the precious gift of Parenthood.

I would not have my daughter without these treatments

By GinaCalifornia

I'll keep this brief: After 5 miscarriages and no issues found by a number of OB/gyns and RE's I found the Beer Center. Fast forward 2 years later and my healthy daughter was born. Immune issues may be rare, but for women who have them, getting them under control is the only way to get through a pregnancy and it is simply a crime that many OB's are not believers of these issues as I am sure there are many couples out there who have given up when they could have been treated. I hope when my daughter decides she would like to have a child these tests and treatments are mainstream so no one needs to go through recurrent pregnancy loss and secondary infertility.

I am now 6 months pregnant

By Amazon Customer

I bought this book in late 2008. Been miscarried twice before and my ob couldn't figure out why, he said everything is normal with me. This book really opened my eyes, i never have thought i have immune related problems, but it turns out that i have. I am familiar with most of the symptoms mentioned in this book. Because I live in Indonesia, i search high and low for a doctor who support Dr. Beer protocol. I got rejected by two or three obgyns before i finally found Prof. Ichramsjah Rahman who support similar ideas about the connection between immune system and miscarriages. Just like protocols in this book I go through monthly IVIG therapy etc. Hope this pregnancy come out successfully :)
