Rip-off alert: Confusing, disorganized, and seemingly not proofread at all.

By Clayton E. Tillman

There are numerous typos throughout the text, and the website doesn't have errata posted. The cases and problem sets at the end of the book don't directly relate to any particular chapter. Furthermore, the questions in the cases require knowledge that the book doesn't even address. Also, the cases have numerous typos which make a sound analysis almost impossible. For instance, in Case 7 the reader is told to analyze the inventory at three distribution centers: Atlanta, GA; Mechanicsburg, PA; and Sparks, NV. The accompanying spreadsheet has data for Atlanta, Mechanicsburg, and New Brunswick?! The spreadsheet for Case 7 also has several columns of data which aren't labeled whatsoever. Even when the data have labels, they are so esoteric that they are only likely to confuse students who are trying to learn about logistics (e.g. Atl Std, Atl Calc SS, Atl Sigma C, Atl k, Atl Adj k, Atl Service, Atl Avg Service, Atl f(k) @ 95, Atl SS @ 95, Atl Avg @ 95, k). None of the labels listed here have any description or definition anywhere in the text or in the spreadsheet. Costing around \$200, this text is one of the biggest rip-offs I have ever seen!

Yes it is a hard read

By Katy

Just a note to support others here who have suggested this book is a hard read. The first 5 chapters, which make up the introductory section of the book, are especially dry and the wording overly academic. The next section, which moves into more specific topics is slightly better. I am a graduate student and I like to read textbooks so it is especially bad if I can't get through it. There were brief occasions where the text actually used clear language and provided examples and they provided a sad glimpse of how interesting this subject would suddenly become to students given a good introduction. Please consider having these first 5 chapters rewritten for the next edition!
